# Global connectivity for future-proof micro-mobility

**Emerging micro-mobility companies like Voi are helping pave the way for cleaner, greener streets, and easing deployment within this new sector will transform operations in our cities and urban areas across the world.**

Swedish micro-mobility company Voi offers electric scooter sharing in partnership with cities and local communities. The company is improving sustainability through innovative technology and open communication with government and regulatory bodies, adapting their products to local needs with a focus on health & safety and net-zero carbon emissions.

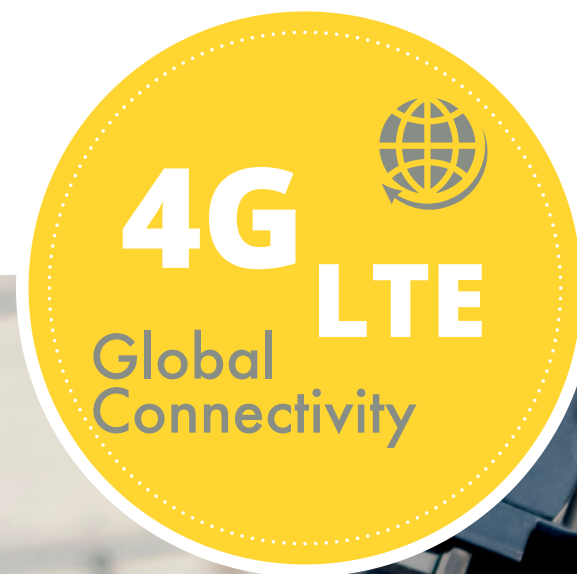

## Full global connectivity management

Stockholm-based Voi operates in more than 50 cities across 11 countries. To date, the company boasts more than 6 million users and has served +35 million rides.

Arkessa offers Voi the flexibility to scale its growing fleet of e-scooters across multiple global locations, whilst managing costs and optimising coverage. Using our global connectivity solution, Voi can easily manage its fleet of connected scooters worldwide, regardless of their location.

**By partnering with Arkessa, Voi is able to scale their growing fleet of e-scooters across multiple locations. SIM lifecycle management, cost control and secure, resilient communication were key requirements for Voi, which Arkessa is committed to delivering through the Arkessa connectivity platform.**
